Allowed types

Question:

Which types are allowed when in the SSID and in the password settings?

Answer:

- SSID: "ABCDEFGHIJKLMNOPQRSTUVWXYZabcdefghijklmnopqrstuvwxyz1234567890'+-_()[]{}!."
- Pwd: "ABCDEFGHIJKLMNOPQRSTUVWXYZabcdefghijklmnopqrstuvwxyz1234567890'+-_()[]{}\$£!/?^#@*\\"=~/%%"

The "space" type is an exception: it can be used but not as first type in SSID name, because it causes software incomprehension in a few Windows versions.
