ECULog

Release 1.01

### INDEX

1 – ECULog in a few words	3
2 – Available kits	3
3 – ECULog expansions and connections	5
4 – Configuration with RaceStudio 3 software	6
4.1 – Channels configuration	7
4.2 – ECU Stream configuration	8
4.3 – CAN Expansions configuration	9
4.4 – Math channels configuration	14
4.5 – Status Variables configuration	15
4.6 – Parameters configuration	18
4.7 – SmartyCam Stream	19
4.8 – CAN Output configuration	20
4.9 – Transmitting the configuration to ECULog	20
5 – Dimensions, pinout and technical characteristics	21

# 1 - ECULog in a few words

ECULog is a little, light and easy to use logger that samples and records channels coming from the vehicle ECU and from the connected CAN expansions

It records the data both into the internal 4GB not volatile memory and in the USB-C memory card.

ECULog allows the user to create math channels as well as a CAN Output using both the channels supplied by the vehicle ECU and these supplied by AiM CAN Expansions. All channels can also be displayed on SmartyCam videos when available.

AiM supported expansions are:

- GPS09c Pro
- GPS09c Pro Open
- LCU-One CAN
- LCU1
- Channel Expansion
- ACC
- ACC2
- ACC2 Open

## 2 – Available kits

ECULog is available in different kits.

#### ECULog CAN/RS232 kit: part number

- ECULog (1)
- 2m CAN/RS232+External power cable (2)
- 2m USB 2.0 Type A Type C cable (3)
- 16GB Mini USB Drive (4)

#### X08ECULOGCRS200

#### ECULog OBDII kit: part number

- ECULog (1)
- 2m CAN/OBDII +power cable (2)
- 2m USB 2.0 Type A-Type C cable (3)
- 16GB Mini USB Drive (2)

#### Accessories and spare parts:

- 2m CAN/RS232 +power cable
- 2m CAN/OBDII/K-Line + power cable
- 2m USB 2.0 Type A-Type C cable
- 16GB mini USB Drive

V02.589.050 V02.589.040 X90TMPC101010 3IRUSBD16GB

**Please note**: for connecting ECULog to the PC use the **2m USB2.0 Type A-Type C cable whose part number is X90TMPC101010** you find in the kit. Any connection using an USB C – USB C cable may not work properly.

# 3 – ECULog expansions and connections

ECULog supports the following AiM expansions:

- GPS09c Pro
- GPS09c Pro Open
- LCU One CAN
- LCU1
- Channel Expansion
- ACC
- ACC2
- ACC2 Open

The image below shows an example of AiM CAN Network.

# 4 – Configuration with RaceStudio 3 software

To configure ECULog follow these steps:

- run RaceStudio 3
- press "New" button on the top right keyboard (1)
- select ECULog (2)
- press "OK" (**3**)
- name the configuration if desired (default name is ECULog 4)
- press "OK" (**5**).

Once the configuration created it is necessary to configure, when possible, the following tabs:

- Channels
- ECU Stream
- CAN Expansions
- Math Channels
- Status Variables
- Parameters
- SmartyCam Stream
- CAN Output

## 4.1 – Channels configuration

• Once the configuration created, the software enters "Channels" tab.

RaceStudio	3 (64 bit)												<u></u>		x t
* 🐲		ĩ ⊥	<b>*6</b>							<u>ع</u>	The Hawk	((:-	40	00	an
All ECU Save	Save As	Clos	se	Transm	it

			OdD	•	Odometer	Odometer Total	Odometer	mi 0.1	1 Hz						
			Fuel		FuelUsed	Fuel Level	Fuel Used	I 0.1	10 Hz						

It shows GPS channels, as well as odometer and it is possible to specify the fuel level. For these information to be available it is mandatory:

- to connect an optional GPS09c Pro/09c Pro Open Module using a DataHub, as shown in chapter 3
- to have an ECU that supplies fuel level information or to connect and configure a custom sensor.

Setting an ECU that supplies fuel level information in "ECU Stream" tab (paragraph 4.2) the software informs the user.

## 4.2 – ECU Stream configuration

Entering "ECU Stream" tab a panel where to choose the connected ECU is prompted.

#### GPS09c Pro and GPS09c Pro Open

Clicking the channels it is possible to set: name. display name and display precision.

## 4.4 - Math channels configuration

As for any other AiM logger it is possible to add Math channels choosing them in a wide library. This can be done using the channels provided by the vehicle ECU or adding and configuring optional custom sensors.

To create math channels; available options are:

- Bias: considering a relation between two mutually compatible channels it computes which one is prevailing (typically used for suspensions or brakes);
- Bias with threshold: it needs the user to set a threshold value for the considered channels; once these threshold are both exceeded the system makes the calculation;
- Calculated gear: it calculates the gear position using engine RPM and vehicle speed
- Precalculated gear: it calculates the gear position using Load/Shaft ratio for each gear and for the vehicle axle too
- Linear correction: typically used when a channel is not available in the desired format or if it is wrongly tuned and cannot be tuned again
- Simple operation: to add or subtract from a channel value a constant value or another channel value
- Division Integer: to get the integer part of the division
- Division Modulo: to get the remainder part of the division
- Bit composed: to compose 8 flags in a bit-field measure Each option asks the user to fill in a proper panel.

	Division Integer	To get the integer part of the division VALUE = integer(CH / a)					
	Division Modulo	To get the remainder part of the division VALUE = CH % a					
	Bit Composed	To Compose 8 flags in a bit-field measure VALUE = f1 + f2*2 + f3*4 + f4*8 + f5*16 + f6*32 + f7*64 + f8*128					
	-		_				
		OK Cancel					

## 4.5 - Status Variables configuration

As any AiM logger ECULog allows to set different Status Variables. To do so press "Add Status Variable" button and fill in Name and display label. Status variable values can also be recorded enabling the related top left checkbox (highlighted below). They **can work** as:

- Momentary: when operating condition occurs output sets to "Active" status; as soon as it is released output comes back to its resting "not active" status; labels can be edited
- Toggle: when operating condition occurs output sets to "Active" status even after releasing the button; when pressed again output comes back to its resting "not active" status; labels can be edited
- or Multiposition: see following pages.

Status variables can be **activated/deactivated** using:

- the same conditions for both actions
- distinct conditions for activation and deactivation
- multiple output values each with its own condition

#### The condition can be:

- always True
- always False
- custom

As shown here below **Momentary** and **toggle** working mode only allows to generate a square wave whose duration of each status can be customized.

### 4.6 – Parameters configuration

Parameters Tab allows to set:

Lap Detection (1): you can set the seconds the lap time is hold on the display; available options are:

- from GPS: track width needs to be filled in
- from optical beacon: it is possible to set a time period during which additional lap signals are ignored to avoid double lap time recording.

Reference Speed (2):

• default setting is "GPS Speed" but if an additional speed source is available it is possible to change it pressing the related button.

### Start data recording conditions (3):

• default condition is RPM greater than 850 or speed is greater than 6 mph but pressing "Add" button it is possible to customize the conditions through the panel that is prompted.

## 4.7 – SmartyCam Stream

ECULog can be connected to both AiM SmartyCam 2 and SmartyCam 3 through the CAN Bus to show the desired data on SmartyCam video. The logger transmits data to the Cameras in two slightly different ways according to the camera and to the fixed setting. Available options are:

- SmartyCam 2 and SmartyCam 3 Default
- SmartyCam 3 Advanced

For ECULog to transmit each channel when connected to SmartyCam 2 or SmartyCam 3 default:

- enter "SmartyCam stream" tab
- it shows all channels and/or sensors that fits the selected function
- in case the desired channel or sensor is not in the list enable "Enable all channels for functions" checkbox and all channels/sensors will be shown

AiM default protocol transmits a rather limited range of information, enough for a wide range of installation.

To transmit a different set of information a **SmartyCam 3 with advanced setting** is needed; **please note: this function is for expert users only**. Please follow this procedure:

- configure ECULog in order to transmit a different SmartyCam stream
- select the SmartyCam stream in SmartyCam 3 configuration
- select "SmartyCam 3 -> Advanced" option in SmartyCam Stream tab
- press "Add new Payload"
- create your desired stream defining the required IDs fields and save it pressing "OK"
- name the protocol

#### 4.8 - CAN Output configuration

The logger can transmit a CAN data stream containing the channels required on AiM CAN bus. It works exactly as SmartyCam 3 advanced stream.

### 4.9 – Transmitting the configuration to ECULog

Once all the tabs set ECULog configuration needs to be saved pressing the related button on the keyboard top left of the configuration Tab. When the configuration has been saved transmit it to ECULog pressing "Transmit" button on the same keyboard. ECULog needs to be connected to the PC through the USB A – USB C cable.

Once the configuration saved press "Transmit" button on the same keyboard.

# 5 – Dimensions, pinout and technical characteristics

The image below shows ECULog dimensions in mm [inches].

The image below shows ECULog pinout.
